How do i sync my comcast remote to my samsung soundbar

Previous Next Sort by votes I've read a few dozen threads on this topic and a lot of different answers. Several posters reported remote codes they found to work on a number of different Samsung soundbars including the 45c. No code I've tried works for me. I'm using the silver Comcast universal remote and the aux button. If anyone has experience with Samsung soundbars and universal remotes, I'd like to hear about it. (I'm aware of the HDMI CEC Arc connection however my tv is not CEC Arc. I'm also aware that if you have a Samsung TV you can use the TV remote, but I don't have a Samsung Tv) So wo CEC the only way to control your SB is to TALK to it directly, by teaching your universal with the original Samsung remote. Hope your Comcast remote has a "learning" mode. I've tried about 20 5 digit remote codes on the universal remote, all supposed to work with Samsung soundbars. Several of them even get the remote to blink twice, suggesting that it is the right code, but so far, none actually work. It's frustrating because you know there is a code that will work.....just don't know what it is! If your remote doesn't have the correct IR codes preprogrammed in you can't add them. The number you enter to access the codes is just where the codes are stored not the actual codes. If you get a Logitech Harmony remote it is programmed from their huge online database. If the codes for your soundbar aren't there you are instructed to teach them into their database so the next user will find them. That's how they expand the database. The remote operates your entire system and has macros. Well worth the price. Sounds right to me. I'll try a used Harmony 300 to experiment. My question is, when I go on the Logitech Harmony site, I see no codes listed. Any ideas on how to find the codes on their site? Also, If I try a used 300 that might not be up to date, will I need a cable from my laptop to the remote in order to update the database in the remote? Do cables come with the new remotes? I've tried the logitech harmony 350. I find that it switches on the soundbar and cable box perfectly except that about half the time it doesn't turn on the Sony tv. There is a clear line of sight to the tv and I'm pointing right at it. Even raised the tv about 3" to raise it above the soundbar. Has anyone else had this trouble with the harmony not turning on some devices? I never had the problem with the Comcast remote. I wonder if a Phillips universal remote might do better.... HOW TO ENTER IN SERVICE MODE THE SAMSUNG HTL5075S without the remote control Streaming Video & TVs 1 Sep 13, 2010 If you are sitting on your couch, looking frustratingly at your coffee table that is filled with about a million different remote controls, then you might be looking at ways to get rid of a few. One way to do this is to program your TV remote to your Soundbar or Audio/Video receiver using an Xfinity remote. To program an Xfinity remote to a Soundbar, first, pair your remote with your TV. Then, using the Setup button (or variation), press and hold it until the LED light turns green. Enter the Soundbar manufacturer's code and after the LED light flashes twice, test the power and volume to ensure a connection. It is important to note that there are different models of Xfinity remotes, so there can be some slight variations in the initial setup process. As an affiliate, I may collect a share of sales or other compensation from the links on this page. Fortunately, there are plenty of guides that can tell you the specific steps for your unique remote model. Along with that, you can visit xfinity.com/remotes for detailed instructions. For now, let's take a closer look at how to set up a few different models. Also read: How to Make a Soundbar Turn on with the TV Can You Program Any Xfinity Remote to a Soundbar? Before we begin to take a look at the variations that come in programming your Xfinity remote to your Soundbar, you might be wondering if this will work with your specific device. After all, there are many different models that continue to pop up as technology continues to advance. Fortunately, Xfinity has thought of this and is already ahead of you. So, can you program any Xfinity remote to a Soundbar? Yes, all Xfinity remotes can be programmed to your Soundbar or another type of audio/video receiver. Note that once you pair your Xfinity remote to your Soundbar, it will only control this speaker option with the volume controls rather than the TV volume, so be sure this receiver is set up as the preferred source. As you look to program your specific model of Xfinity remote control to your Soundbar, be sure to review the steps that are specific to your remote. For example, an Xfinity X1 remote will require the use of the Setup button whereas the Xfinity XR-15 will use the A and D buttons for a similar function. Ok, so now that you are aware that yes, you should be able to program just about any Xfinity remote to your Soundbar, we are going to take a look at how to do this with two different models: the Xfinity X1 and the Xfinity XR-15 models. Keep in mind that these are just a few of the various Xfinity remote models that are available today. So, if you are using an Xfinity remote that is not listed here, be sure to check the specifications for your specific device. With that said, let's take a closer look at how to program various Xfinity remotes to your Soundbar. Programming an Xfinity X1 Remote to Your Soundbar If you are using the Xfinity X1 remote, then you will likely be pleased with how simple it can be to pair this device to your Soundbar. Of course, you can follow these steps for most Audio/Video Receivers, but you will just need to know the manufacturer's code for that device. To program an Xfinity X1 remote to your Soundbar, consider the following steps: 1. Make the Soundbar the receiver output Before you pair the remote to your Soundbar, you will want to ensure that the Soundbar is the default output receiver for your sound. Otherwise, your TV will likely default to using internal speakers, so programming your remote to your Soundbar will be pointless. Along with this, ensure that there is a stable connection between your Soundbar and the TV. This will likely either be with an Optical Cable connection or through an HDMI ARC Cable connection depending on your model of Soundbar and setup preferences. 2. Press the Setup button on your Xfinity X1 remote Now that you are sure that the Soundbar is connected to your TV, and it is the preferred output receiver, you can begin the programming process with your Xfinity X1 remote and Soundbar. Using this remote, look for the Setup button. Press it down for a few seconds. 3. Wait until the LED light at the top turns green You might have to hold the Setup button down for a few seconds, but once it begins to register that it is initializing the setup process, the LED light should turn from red to green. This silver of light at the top of your remote is what shows up when you press almost any button on your remote. 4. Enter the Soundbar's manufacturer code Again, now is the time to press the 5-digit manufacturer's code using the number buttons on your remote. If you do not know what the manufacturer's code is for your Soundbar, then be sure to look this up online or use the Xfinity searching feature to find this. 5. Wait for the LED light to flash twice (in green) Once you have entered the 5-digit manufacturer's code using the numbered keys on your remote, the LED light at the top of the remote will flash twice. This indicates the programming of the remote and means that it is now time to test that this was done correctly. 6. Test the remote Just as you would test the connection on your Xfinity X1 remote, you would do the same with the Xfinity XR-15 remote, too. Test the TV volume and power to ensure that the remote is working. Then, if you are well on your way to one fewer remotes sitting around your coffee table. What to Do if your Xfinity Remote Programming Fails to Connect to the Soundbar? Hopefully, you can follow these simple steps to arrive at a very easy connection between your Xfinity remote and your Soundbar (no matter the make and model on either of these. But, if you are sitting there puzzled about why this is not working for you, then there is at least one more step you can take. What do you do if your Xfinity remote programming fails to connect to the Soundbar? One of the first things to test if you cannot get your Xfinity remote programmed to your Soundbar is to press the code 9-9-2 and then hold the Channel Up button for up to 3 minutes until the Soundbar turns on. Then, reinitiate the programming steps. Be aware that this method can seem like it takes forever as the remote resets to be able to recognize your Soundbar. If you have not noticed that your Soundbar has turned on when pressing the code and holding the Channel Up button for at least 3 minutes uninterrupted, then you might want to try another solution. Hopefully, you will not have any issues in the first place. But, if you do, and you need to test out various solutions, be confident in going forward, as this one day of frustration in programming your Xfinity remote to your Soundbar will mean decreased daily frustration after you have succeeded and can use your Xfinity remote once and for all. Also read: How to Hook Up a Soundbar to Multiple Devices xSorry to interruptCSS Error Comcast Xfinity is one of the top cable TV services but sometimes it can be difficult to use. A lot of people run into problems with the remote control, such as pairing and setup. You can pair your Comcast remote with your TV or audio equipment such as a soundbar.Since there are many Comcast remotes, and even more TV brands that each has different codes, this tutorial focuses only on the latest and most popular remotes and TVs. However, you'll also a section explaining how to get the codes for other TVs and Comcast remotes.Comcast Remote: How to Pair an X1 Remote with the TVComcast Xfinity remotes are rather confusing on their own, and the fact there are several models doesn't help either. You can verify the type of your remote using the official Xfinity support site.You can see there the pictures of all the Comcast Xfinity remotes in existence and compare them with the one you have. Also, there are instructions for pairing them with different TV brands, which we'll get to later.Here is how to pair your X1 remote with your TV:Make sure you have working batteries in your remote. Test it by turning on the cable box on and off. If the remote works, proceed with the following steps.Hold the A button on your Comcast remote.Select Remote Setup from the menu on your TV screen.Simply follow the instructions on your TV until your Comcast remote is paired with the TV. Now you can proceed with programming the remote for controlling the TV and audio equipment.Those with the voice-enabled X1 remote have an even easier way of programming the Comcast remote. All they need to do is to hold the mic button and speak "Program remote".How to Program a Comcast RemoteFollow these steps to program a Comcast remote which has a setup button (some of them don't, and the programming steps for those will follow shortly after this):Turn on your TV manually and make sure the input is set for the set-top box.Hold the Setup button on your Comcast Xfinity remote until the LED at the top of the remote goes from red to green.Press the Xfinity button on your remote. You will see empty boxes for a tri-digit code on your screen. Enter the numbers 9 9 1 in those boxes and the light on the remote should blink green two times.Press the CH^ button on the remote as long as the TV doesn't shut off.If it shuts off, press the Setup button on the remote again to lock in the code.Now hold the TV power button on your remote until it turns on. When it does, you are done with programming.Comcast Remote Programming without the Setup ButtonSome Comcast remotes like the XR15 don't have a setup button. Here is how you can program them:Manually turn on the TV.Simultaneously hold the Mute and Xfinity buttons on your remote for several seconds until the light at the top of the remote switches from red to green.Now you need to find the correct Comcast remote control for your TV's manufacturer. You can look it up at the official Xfinity site mentioned previously. Under the Choose the brand dropdown menu, select your TV brand and click on continue. You can also find Audio brands here if you select Audio/Other.In this window, you will be asked for the five-digit code from your manufacturer. Some may have more than one code which you'll have to try one at a time. For example, the most likely code for LG is 12731. If the remote flashes green twice, you have entered the right code. If it flashes red and green, the code is not valid. You have to keep trying all the listed codes.You can test if the process was successful by aiming at the TV with your remote and holding the Power button. If your TV turns off, the code worked. Also, try using the volume and mute buttons and see if they work.Alternative Comcast Remote Programming MethodAnother way of programming your Comcast remote is through the Xfinity My Account phone application. Tech-savvy users who have this app on their Android or iPhone devices may prefer this method.Here is the official download link for iPhone users, and the link for Android users. Once you have installed and updated the app, proceed with these steps:Open the Xfinity My Account app on your Android or Apple smartphone.Select the TV option, then select the TV Box you have, and finally tap on Setup a remote.Choose the appropriate model of your Comcast remote and select Continue.Choose TV or Audio/Other, depending on the device you're using, and follow further instructions on the screen.Remote Codes for the Most Common TV BrandsThere are hundreds of TV brands on the market, and there's no point in listing the codes for all of them. Here are the Comcast remote codes for the top TV brands in America:LG - 12731,11758, 11178, 11265, 10032, 11993Samsung - 12051, 10030, 10702, 10482, 10766, 10408Sony - 10810, 11317, 11100, 11904, 10011, 11685Panasonic - 11480, 10162, 10051, 11310, 10051, 10032VIZIO - 11758, 12247, 10864, 12707, 11756m 10178While trying out these codes, note that the first one mentioned here for each of these brands is most likely to work if you have the latest TV. If you have a TV which is not listed here, make sure to visit Xfinity's official site and get the codes for your TV there.Code GreenHopefully, this tutorial will help you pair and program your TV or other audio-video devices with your Comcast remote. It is not easy and simple right away, but you only have to do it you will get it.If you upgrade your TV, you'll already be familiar with the process and can proceed without apprehension. So, are you satisfied with Comcast Xfinity? Let us know in the comments section. Disclaimer: Some pages on this site may include an affiliate link. This does not effect our editorial in any way.
