What is the best volume booster. Best headphone volume booster for android. Loudest volume booster app. What is the best free volume booster app for android.

For most smartphone owners, the audio quality from the built-in speakers may be low and the sound almost never loud enough. If you want to set different volume levels for individual apps or if your Android device's volume hardware keys are broken, there are many ways to squeeze more power from the native volume controls. One of these ways is to use a volume booster app. Whether you're listening to a podcast or enjoying Netflix with friends, we'll show you the best volume booster apps for Android to increase the sound level and quality on your device. Note: Boosting your device's audio output may damage your headphones, speaker or your hearing. Best Volume Booster Apps for Android Devices Pick one app from the choices below and you won't have to replace your device for the low volume alone. 1. Precise Volume Precise Volume is a volume booster app that overrides the standard 15 volume steps limit on Android devices with its 100-step volume levels. The app hooks into your phone or tablet's audio system and gives you more options to control volume. There are presets that activate when you plug in your headphones, an equalizer with a sound amplifier and bass booster, plus custom volume levels for different apps. On top of more fine-grained control over volume, the app automatically sets volume for you when you need it most. You can also set volume for different Bluetooth devices, headphones, apps and more. Also, you can set it in such a way that when you plug a device into your device's headphone jack, the app will open a dialog asking you which preset to use for your headphones. The app is free to download and use, but you can get the Pro version and access advanced features like screen off override, which controls behavior while the screen is off or the phone is in your pocket. Plus, you can change the number of volume steps to anything between 0-1,000,000 and enable dark mode for night viewing. 2. Volume Booster by GOODEV Volume Booster is a free volume booster app for Android that increases your headphones or speaker volume as you play music, audiobooks or watch a movie on your device. The app is small and simple yet very powerful and versatile to use when you want to increase volume beyond the standard levels your Android device provides. However, the app developer recommends moderation while using the app as it may damage your hearing or speakers when used for a prolonged amount of time. Plus, the app doesn't work with all Android devices, especially those running Android versions 4.2.1 to 4.3, neither is it ideal for adjusting your speakerphone volume in phone calls. 3. Equalizer If you want to improve sound quality, you can use an equalizer as it not only makes your device louder, but also offers an enhanced experience with your audio no matter the style. Equalizer volume booster app for Android offers a five-band equalizer controller with a sound amplifier, bass booster, 11 stock preset sound profiles and Reverb presets. The app also offers frequency sliders to help you tame any distortions, and you can create your own presets if you upgrade to the premium version. If you have good quality earbuds or headphones, you can use the Bass Boost for a more thrilling audio experience when listening to your favorite music or watching a movie with surround sound. 4. VLC for Android VLC for Android is a free multimedia player that plays discs, network streaming protocols, devices and most multimedia files. You're probably wondering what it's doing on this list, but it's a great alternative to downloading and using a standalone volume booster app for Android devices. The full audio player comes with an equalizer, filters, and plays all audio formats, including the unusual ones. Plus, it has no ads, spying or in-app purchases. The app supports gestures to control volume, audio headsets control, and offers widgets for audio control, cover art and an entire audio media library. VLC for Android is a quick solution to your volume woes, especially for music and movies, and you can boost sound up to 200 percent using the Audio Boost feature. An equalizer with preset sound profiles is included so you can pick what suits you listening tastes best. 5. Boom Like VLC for Android, Boom is a music player app with a built-in equalizer, bass boost and other audio enhancements for a better listening experience. The app also offers system-wide audio effects including loudness, custom-tuned equalizer presets and virtualizer. If you stream music from Spotify, Apple Music or other music streaming services, you'll love Boom's 3D surround sound quality on headphones. Not only that, you can also access podcasts or radio stations so you're not just limited to listening to music on your phone. Basically, you're getting both a volume booster app and music player in one app, but you'll have to pay for the service after the initial 7-day free trial is over. 6. Equalizer FX Equalizer FX allows you to improve your Android device's sound quality and get more to enjoy your audio listening experience. The app offers features that let you adjust sound effect levels and get the most out of your music. Among these features include an equalizer for changing the frequency envelope of the sound, Bass boost to amplify or boost low frequencies, and a Loudness Enhancer to increase loudness. In addition, you get virtualization to enhance stereo effect, 12 presets or you can create your own, and equalizer widgets for your home screen. The app is free to download and works with music players as well as Spotify, Pandora, and other audio streaming services. 7. Podcast Addict Podcast Addict isn't just the leading podcast app but there's so much you can do with the app in terms of enhancing your listening experience through its volume boost setting. If you're an avid podcast listener, you've probably come across some podcasts that lack great sound quality, meaning you have to increase the sound if you have to hear anything. For this reason, Podcast Addict is a suitable app because you get a built-in equalizer to help you adjust the sound while toning down audience noises or music. Do You Need a Volume Booster App for Android? While a volume booster app can help improve the audio or sound quality on your device, not all of them are genuine. Some of the options you'll find on Play Store come with intrusive ads while others are just junk or spammy apps that promise to boost the volume but you'll struggle to get them to work. There are other ways to boost volume on Android devices besides using a dedicated app, and these methods include: Crank Up the Volume With the right volume booster app, your Android device can be much louder than you think. Regardless of the app you decide to use, there's still the risk of damaging your hearing, headphones or phone speakers if the volume is too high for long periods of time. Do you have a favorite volume booster app? Tell us about it in a comment. It's no doubt that everyone loves to watch movies, TV Shows, YouTube videos on their Android smartphone. Not just movies, but Android smartphones are also pretty well made for listening to music. However, there's one problem that we often deal with while playing music and watching videos - many Android smartphones aren't loud enough. Due to this, users have been left with no other option apart from replacing the device. However, replacing an Android smartphone just for low volume isn't ideal. So, what can we do? Well, app developers have created a few apps that can maximize your device's sound capacity. Just search for 'Volume Booster' on the Google Play Store, and you will find tons of apps over there. Also Read: How to Mute Spotify Ads on Android Devices List of 10 Best Volume Booster Apps For Android Device So, in this article, we have rounded up a few best Android volume booster apps that can really make your Android sound louder. So, let's explore the list of best Volume Booster Apps. Important: Playing super-loud sounds and listening at high volume for a prolonged amount of time can destroy both speakers or hearing. So, if you are going to distort the audio, make sure to lower the volume level. Lots of users have reported destroyed speakers and earphones. So, make sure to use these apps at your own risk. 1. Volume Booster GOODEV The Volume Booster GOODEV is slightly different from all other apps listed in the article. The application is pretty lightweight and straightforward. It's a free app that claims to boost your speaker or headphone sound volume, which it does by making some changes to the system files. However, Volume Booster GOODEV doesn't work on Android devices running on Android 4.2. Also, few users have reported destroyed speakers and earphones. So, make sure to use this app at your own risk. 2. VLC for Android The popular media player app of desktop, of course, VLC, is available for Android also. The good thing about VLC for Android is that it supports almost all media formats. What's more important is that it lets you increase the sound output to the maximum level. However, increasing the sound above the default level might damage the speakers or even your ears. 3. Precise Volume If you are looking for a full-featured volume control hub for your Android device, then Precise Volume might be the best pick for you. Guess what? Precise Volume overrides Android's 15 volume steps limit, giving up 100 different volume levels. It safely hooks into your device's audio system to provide more volume control options. 4. Equalizer FX If you are searching for ways to improve your Android device's sound output quality, you need to try Equalizer FX. It's one of the top-rated equalizer app available for Android smartphones. Equalizer FX lets you adjust the sound effect levels so you can get the better out of your music. By default, Equalizer FX offers you 12 different preset to enhance the sound quality. What's more interesting is that you can even create your own sound preset with this app. 5. Viper4Android If you have a rooted Android smartphone, Viper4Android might be the best pick. Guess what? Viper4Android needs root access to apply sound filters to the overall system. With that, the enhanced sound effects can be felt from any Android app that you use. Viper4Android has a feature known as an eXtra Loud mode which runs from Slight to Extreme strength levels. Not just that, but

Viper4Android also offers a few Speaker optimization options that can help you to achieve better sound quality from your phone's speaker. 6. Super High Volume Booster This app is heavily popular on the Google Play Store, but how it works remains unanswered. The Google Play Store listing says that it can increase the volume in just one click but doesn't provide any details on how it does. The app doesn't offer users an equalizer that can improve the audio tones. However, many users have claimed that it deteriorates the sound quality. Since the app developer hasn't disclosed how it works, it's best to use it on an old device. 7. Volume Booster PRO This app claims to increase all music media volume, including video sound, game sound, music sound, etc. If that wasn't enough for you, let me tell you that the app also claims to increase all system volume like ringtone volume, notification volume, etc. The app works on both rooted and non-rooted Android smartphones, and it's the best volume booster app that you can use right now. 8. Super Loud Volume Booster Although the Google Play Store listing doesn't tell much about the Super Loud Volume Booster app, it still seems to work. The app is now used by millions of users worldwide, and it needs less than 10MB of space to install on your smartphone. Instead of changing the system settings, Super Loud Volume Booster allows you to adjust your soundtracks to optimize its output. The app is super easy to use, and it could help you boost your smartphone speakers. 9. Speaker Boost This app is a bit different compared to every other app listed in the article. Instead of depending on Equalizer and sound profile, it enhances the sound volume by removing the distraction noise. Apart from that, Speaker Boost also offers a music amplifier. The android app works on both rooted and non-rooted Android smartphones. 10. Sound Amplifier Well, Sound Amplifier from Google is another best volume booster app that you can use right now. The app is only meant to enhance the audio from your Android device using headphones. The primary features of Sound Amplifier include boosting quiet and reducing loud sounds, personalizing the listening experience, reducing unwanted or distracting noises. So, these are the ten best Android Volume Boosters apps that you can use right now. If you know of any other apps like these, let us know in the comment box below. I hope this article helped you! Please share it with your friends also.
