The Spa models: Â, Â · Â, Â · Select Series 880 series Â, Â · Â, Â · 780 Series 680 Series These are the error codes and messages on the display that a SundanceÂ,Â® spa can show, together with Their meaning and any actions requested: Message Meaning An action needed summer logic occurs when the actual water temperature for the spa spa of 2â, Â ° F temperatures (1â, Â ° C) above set and Â It's more likely when it's very hot. The condition causes the circulation pump to automatically turn off if it is execution in order to avoid adding further heat to thermal water that Care overheatsÂ €. This setting is not programmable by the user. This condition does not kick until the water temperature (35 Â ° C) 95a Â ° C. The Systema Spa s capacity to cool down is directly influenced by the ambient temperature. Very hot summer environmental temperatures can prevent cooling spa away because its insulating construction is designed to minimize Costs and hold in heat. One of the sensors found that the water in the hot tub is 112a Â ° F (44th Â ° C). It represents an overheating € - and closes tub down because the water temperature is too hot. The temperature is not safe. The circ. Pump stops working to reduce heating by friction when the water temperature reaches (1st Â ° C) 2â, Â ° C upper than the set temperature. Don't get into water! Remove the spa cover to allow the water to cool to resolve the situation. Attention: Do not leave this lid in the presence of children. Stop power towards the hot tub and contact your dealer or technical service if the problem continues. Stands for a sensor 1a and displayed when the upper limit sensor does not work properly. Indicates a short and spa sensor it is off or a sensor and stove is deactivated. Retailer of contact or technician. It is for a sensor 2a and displayed when the temperature sensor does not work properly. Indicates a short-circuit sensor and the heating is deactivated. Retailer of contact or technician. When the FL1 code starts to flash it means that the flow switch is faulty open and blocked probable cause of a dirty filter or because there is a circulation pump air blocking problem Code Intake.When FL2 starts flashing means that the flow switch Isna T Working and locked closed. In both cases, the spa heater will be deactivate.â, Â · In both cases, the spa heater is deactivated and the main pump # 1 can make the same.â, Â · The problem is caused by a cartridge Excessively dirty filter interrupting the flow of water that leads to LOCKA air conditions AA pump and flow sensor malfunction. 1. Check if the water level is below the lowest pillow, but above all the jets. Add water if Needed.2. Check the presence of dirt or cartridge.3 clogged filter. a) Filter cartridge remove to purge the damper from the circulation pump socket. b) Keep a wall hose Overfitting wall filter cartridge and use a rag to carry out a tightness of flexible tube extremity. c) Get an assistant to help transform water for 30 seconds. Then turn it off. d) Replace the filter cartridge and check the worked.4 solution. If the circulation pump is not going on, try by removing power to the main switch. Turning to restore cycle for the circulation pump. After the pump itself triggers, the error message should go away. 5. Contact the dealership or a technician if the problem continues. It occurs only in economics mode and indicates a cool condition where TEMPS fell 20 Â ° F (11a Â ° C) under the current settings for them. System Activates the heater and pump jets 1 To bring temperature within 15 ° F (8a Â ° C) of temperature set. No action required, but during the cold season it is advisable to increase the quantity of cycles filtering. This occurs only when Spa is found in economy mode and stands out for its a, We mean a system has detected a potential freezing condition and yes the system to implement antifreeze protection to get the spa outside the danger area. No action is required. The main pump operates in this condition for circular hot water throughout the hydraulic system until the unit is heated up to 15 Â ° F (8a Â ° C) the temperatures set. The water temperature raised on acceptable and triggered safety limits the safety of a spa watchdogÂ € program. Condition can cause injury or damage to the spa and its components. The wellness center deactivates in this situation. Don't get into water. Contact retailer or a Indicates that Spa needs a new UV bulb. Buy New UV retailer bulb and reset countdown. Message Meaning Action Request is for an overheat € - and closes the sliding tank because one of the temperature sensors found that the water temperature raised over acceptable safety limits. Don't get into water! Remove the spa cover to allow the water to cool to resolve the situation. Stop power towards the hot tub and contact your dealer or technical service if the problem continues. Potential freezing condition detected and the system activates the heater and e Pump # 1 for protection. It happens when the thermal water is more than 19.4 Â ° F (-7 Â ° C) more cold than the fixed points of the temperature. The system remains in this mode until the water temperatures rose to 59 Â ° F (15 Â ° C) under the set temperature. No corrective action required. Stand for flow switch. It means that the flow switch is malfunctioning or the flow of water is to be inhibited. The heater is deactivated and the filter / circulation can be deactivated, too. Check the clogged filter and adequate water levels in the hot tub. See PP 60-62 of the owner's manual to do so. Contact your dealer or service technician if the problem continues. * Note: You can view this message after the hot tub has been downloaded and filled, and the pump has not repurchased its first. See page 77 of the owner's manual if this is the case. The temperature threshold of the printed circuit has been exceeded. The message will be via once the tab temperature cools to acceptable limits. If you continue to see this message, provide shadow for the portion of the hot tub that houses the equipment. A freezing condition has been detected by the system. The jet pumps work until the water is heated and spa is out of the danger area. No action is needed. Note that this message can occur when the hot tub is filled for the first time because the tap water is usually very cold. Indicates a current break from the hot tub. The power is fluctuating in the 2ndary power line resulting in low voltage DC. Attempt to rest the spa power, the PF error will restore if power levels return to normality. Contact your dealer or service technician if the problem continues. Indicates the defective communication between the spa control panel and the printed circuit and / or the remote control panel. Contact your retailer or service technician. Stand for Â € â, ~ Â "sensor 1" and displays when the high limit sensor is malfunctioning. Indicates a short sensor and a spa is closed or a sensor and an open heater are disabled. Contact your dealer or a technician of the service. Stand for Â € â, ~ Â "sensor 3 ... and displays when the main water temperature sensor is short-circuited or disabled. The heater is disabled in this case. Contact your dealer or a technician of the service. Indicates that the flow switch is malfunctioning. The system is disabled in this case and start the system is short-circuited or has a flow switch closed in this situation. Contact your dealer or a technician of the Service. Indicates that Spa needs a new UV bulb. Buy new UV bulb from the retailer and restore the countdown timer. Message Meaning Action Request stand for Â € â, ~ Â "Sensor 1Â € â, ~ and displays when The High Lim sensor lte is malfunctioning. Indicates a short sensor and a spa is closed or a sensor and an open heater are disabled. Contact your retailer or service technician. Stand for Â € â, ~ Â "sensor 2Â € â, ~ and displays when the temperature sensor is not malfunctioning. Indicates a short sensor and the heater is disabled. Contact your retailer or service technician. When the FL1 code starts flashing, it means that the flow switch is malfunctioning and locked in an invalid way due to a dirty filter or because there is an air block problem with the hiring of the circulation pump . When starting the flashing FL2 code means that the flow meter is not working and locked closed. In both cases, the thermal heater will deactivate .Â, Â · In both cases, the thermal heater will deactivate and the main pump is do the same. Â · The problem is caused by an excessively dirty filter cartridge that interrupts the flow of water that goes Â € â, ~ "Locking conditions" on the pump and the flow switch malfunction. 1. Check if the water level is lower than the lowest pillow but above the jets. Add water if necessary.2. Check the dirty or clogged filter cartridge.3. a) Remove the filter cartridge to delete the air block from the intake of the circulation pump. B) Keep a garden tube on the filter cartridge wall fillet and use a rag to make a seal around the end of the hose. c) Take an assistant to help transform water for 30 seconds. So turn it, then turn it off. d) Replace the filter cartridge and check the solution worked.4. If circulation circulation It does not turn on, try cutting the power to the main switch. Activating it will restore the cycle for the circulation pump. After the first of the pump itself, the error message should go away. 5. Contact your dealer or service technician if the problem continues. It occurs only in economics mode and indicates a fresh condition in which temperatures decreased by 20 ° F (11 Â ° C) under the current settings for them. The system activates the heater and the jets 1 pump to bring TEMP within 15 Â ° F (8 Â ° C) of TEMPS SET. No action required, but during the cold it may want to increase the quantity of filtration cycles. This occurs only when Spa is in economy mode and is for "bicissimo," the system detected a potential condition for freezing and will cause the system to implement freezing protection to get the wellness center outside the danger area. No action is needed. The main pump works in this condition to circulate warm water throughout the hydraulic system until the unit is heated up to 15 Â ° F (8 Â ° C) of the temperatures set. One of the sensors found that the water in the hot tub is 112 Â ° F (44 Â ° C). It is for Â € â, ~ Â "OverheatÂ € â, ~ - and the water temperature is too hot. The low speed pump is activated to circulate water through the heater. Don't enter the water! The water temperature raised acceptable security limits on and triggered the security program Â € â, ~ Â "WatchdogÂ € â, ~ of the spa system. The conditions can cause injury or damage to spa and its components. The spa is deactivated in this situation. Don't enter the water! Contact your retailer or service technician. Indicates that Spa needs a new UV bulb. Buy new UV bulb from the retailer and restore the countdown timer.
