Join @ApkParty on Telegram PUBG Lite Android/Windows A PUBBG Lite Hack is any tool or app that can be used to cheat and get unfair advantages in PUBG Lite, such as tools, aimbots, wallhacks, modded APKs on Android and DLL injection cheats on PC. Most of these cheats are available for free Download and will work nicely for getting more free BP (Battle Points) and UC (Unknown Cash) for skins and crates. Hacks, Generators or Tools for unlimited / free UC and BP do not exist in PUBG Lite and are always fake. PUBG Lite Hack Hacks are awesome modifications in the code running on your PC or Android gaming device that changes the way the PUBG lite program or app works on your system in order to implement cheats, such as incredible wallhacks, aimbots, no recoil cheats, no spread, aim assist and so on. - These hacks are either implemented through modded game cleints or modded APK downloads for Android and DLL injection hacks for Windows PC systems that run PUBG Lite. The most awesome hacks are usually the ones that come equipped with various cheating options and features at once in the form of a mod menu or a interface that allow you to turn on and configure the available hack variants to your own liking. If you are looking for Hacks to use in PUBG Mobile and PUBG for PC you can find them on HackerBot too. Also check out our Free Fire Hacks if you are looking for more battle royale action. Aimbots The aimbot wit without a doubt the most powerful of all PUBG Lite Hacks out there for download, simply because automatically aiming and shooting is not only good at getting you kills and therefore good loot, good weapons, ammo, healing items, energy drinks, meds ect, but it turns out that getting a lot of kills also helps you to survive and not get killed and therefore allows you to get more BP, more chicken dinners and more swag though UC. However, while PUBG Lite aimbots are certainly amazing and will allow you to automatically aim and shoot at players in Android and PC, there is a risk associated with using this kind of cheat as well. Both Tencent Games and Bluehole are both very well known for banning cheaters from their respective versions of PUBG and this wont be any different for the PUBG Lite version as well and aimbots are nice, but very easy for other players to detect, report and therefore there is a risk of getting banned when using this kind of tool. - So if you are going to use an aimbot for PUBG Lite, make sure you use it carefully, respectfully and sparingly in order to keep your account safe and simply to be a nice human being. PUBG Lite Wallhacks Now while a wallhack will not automatically get you kills like an auto aiming system would, this is still the most fun and arguably the overall best hack to use in PUBG Lite. A good wallhack will allow you to see enemies, items, vehicles, air drops, explosives and other items through walls and other objects. This is usually done by highlighting the items, players and other objects using colored boxes. The greatest advantage of using a PUBG Lite Wallhack or ESP / VAC is the first moments after jumping out of the plane and landing. The ESP will allow you to see where players are landing, and be able to see and loot weapons first and get the advantage in the early minutes of the battle royale round. When using a good wallhack, you will have to try in order to die in the first minutes of the game, which is when most players are eliminated from the game. The greatest thing about using this kind of visual tool in order to cheat in PUBG Lite is that you still have to manually aim and shoot, retaining the fun and sense of achievement that are the best thing about online multiplayer shooters like Player Unknowns Battlegrounds Lite. Overall, the kind of cheat we recommend over all others, because it will augment your skill nicely and give you an advantage without making you super overpowered to the point of unfairness. Mods for Mobile PUBG Lite For those playing PUBG Lite on mobile (Android or iOS) the arguably best and most convenient way to cheat is to simply download a mod, which is a modified version of the PUBG Lite game app that has been modded to feature hacks. On Android these mods come in the form of APK mod downloads that can simply be installed instead of the original game and usually require no root. On iOS such mods usually will have to be installed through a modded appstore. PUBG Lite mods for mobile devices have the same potential as other cheating methods on other platforms: Aimbots, Wallhacks, scripts, auto healing, no spread, aim assist, speedhacks, teleporting and other cheats are potentially possible. However, unlimited UC, unlimited BP, free skins and so on are still not possible even on the awesome Android and iOS platforms. There are also some advanced scripts like auto loot, auto bandage, auto heal, auto reload, auto mod guns ect. Keep In mind that all unlimited UC and BP sites are human verification scams. Mod Menus Premium, top-quality mods that come with an in-game menu that allows cheaters to customize and toggle on and off a mods features is called a 'mod men' and these are by far the best quality cheating apps out there for PUBG Lite on Android and iOS mobile. Menus to customize aimbots and wallhacks also exist on PC, but are pretty much the standard there and nothing too special. Mobile mod menus are generally made by the best and most experienced cheat developers in the industry, coming with more and more powerful features, better performance, higher customization, easier installation process, faster updates and other quality of life improvements to make running cheating software a breeze for even the most newbie game hackers: Overall, while premium, this kind of download for PUBG Lite is well worth the hassle and will generally offer free access to limited versions for users to download for free. PUBG Lite for Windows PC Hacks The biggest upside about playing PUBG Lite on PC instead of mobile is that you don't have to worry about downloading another mod with every update the game receives. Once you have downloaded a working hack, aimbot or wallhack, it will usually last at least a few weeks. Also installing and running cheats for the PC version of PUBG Lite is a lot more straight forward and easy than on most mobile devices. All you need to do is to find a working download either for free or as a subscription, install it and run it. However, it still pays to try the hack on a secondary account first, especially with free files downloaded from the internet, to make sure your main account does not get banned. While aimbots and wallhacks on PC will usually have a lot more options and are a lot more powerful, the great downside of the Windows PC platform is that anti-cheating measures are extremely developed here and the risk to your game account is significantly higher than on other online gaming platforms, which makes it extremely risky to use free downloads as opposed to private hack solutions. Generators for BP and UC As already touched on in the intro, there are no working tools or generators for 'generating' free UC and BP and all these offers are fake and scams. However, this of course demands explanation as to why this is the case, when stuff like aimbots, wallhacks, nospread, bullet speed, walk speed and even damage can potentially be manipulated at times. - The reason it is impossible to get unlimited free Unknown Cash / UC and Battle Points / BP or free skins is due to all your account data including currencies and unlocks not being processed on your physical Android / iOS / Windows PC device, known as client-side, but on the game servers, known as server-side. Now any kind of cheat or tool is only able to manipulate data that is stored on your physical device or emulator as it is the only data you have access to modify. The servers, for all practical purposes, cannot be modified, manipulated or hacked, or rather no one wants to go to prison for a few virtual fun bucks. - Online Generator websites for PUBG Lite are an impossibility, will never work and never have worked. Is there a way to get unlimited UC and BP in PUBG Lite? No, sadly hacking money and currencies such as Unknown Cash (UC) and Battle Points (BP) is impossible in PUBG Lite on both Android and Windows PC. This is due to the fact that this is an online multiplayer game, which means your account information, currencies, skins and other unlocks are stored on online game servers which cannot be modified in any way. And tools, generators and similar software that claim to do this are fake, there are also no mods for unlimited UC and BP or skin unlockers. Exploits & Glitches Exploiting and Glitching is the use of bugs and flaws in the game to gain advantages, such as glitching through walls to hide out of bounds, glitching under the map to gain god mode, using lag to duplicate items, using glitches to become invisible or similar. - While such flaws and bugs that can be used to break PUBG Lite are extremely rare and always temporary, getting hotfixes as soon as the developers become aware of them, they can be more powerful than any other possible cheats you might find for PUBG Lite. Even otherwise impossible server-side cheats can become possible temporarily, such as unlimited free UC (Unknown Cash), BP (Battle Points), free Crates, free Skins and free in-game purchases. - But generally the exploits you will see are glitching under the map for a kind of semi-god mode, unlimited ammo and clip, weapon spawning, overpowered camping points, item duplication for amore, healing items, ammo, equipment, less spread with certain weapons resulting in more DPS and such things. Exploiting will never be done through any kind of website tool or 'generator', all those are fake and will never work. - On top of that glitches and exploits are generally usable without root and without jalbrake required on both Android and iOS, making it the perfect beginner cheat. Mod Money As with every game that is on mobile, there are many thousands of shady APK downloading sites, iOS modding portals, shady forums, fishy app stores and other app downloading utilities that are advertising 'Mod Money' for PUBG Lite. - Again, it is impossible to get working money cheats in this game due to server-side processing outside of exceptionally rare bugs and certainly you won't get unlimited money (UC / BP) from a mod. - All these mods are at the very least using misleading and false advertising, will not give you the features promised an may even infect your phone with malware. In no case ever should this kind of mod be installed on a rooted physical Android or iOS device. If you do not believe us and must try such a download, then we recommend using an emulator to test our statements as to not risk your physical device and staying safe and secure where it matters.
